REVIEWS

★★★★★
Davidson College | June 2020
JD Mills, Manager, Digital Transformation
As soon as we saw Kuali Build, we knew we had found what we were looking for – something that could solve for 90% of our low code use cases, while being completely accessible to our end users.

★★★★★
Vince Kellen, CIO, UC San Diego | October 2019
Adopting Kuali's approach allows us to enable more people, more business users, to create their own solutions. This increases the capacity of IT while still providing a standard of excellence that connects people with each other through unified practices.

★★★☆☆
University, > 1,000 employees | January 2019
It is a professional workflow designer which is compatible with sharepoint. I have used this software in order to design complex workflows usable in SharePoint platform. It takes some time to get used to the software and practically benefit from all the features

★★★☆☆
Hardware , < 200 employees | December 2017
Nintex does a better job than SharePoint Designer on the process automation in SharePoint... The thing that I dislike [about] Nintex most is their horrendous customer service. Within a year of the license purchase, I have been contacted consistently with 6 different account managers.

PRICING

Starting at:
$850
per month

Three-tier model scaling with institution full-time employees. Plans vary on included builders and apps. Unlimited workflows and submissions.

Starting at:
$875
per month

Usage-based model, purchased in bundles of workflows starting at five. Model includes overages and extensive add-ons.

SHOULD YOU USE THESE PRODUCTS TOGETHER AS PART OF A TECHNOLOGY PORTFOLIO?

❌ **NOT RECOMMENDED**

ADVICE

**CONSIDER BUILD WHEN...**
Anyone in your institution needs to create secure, scalable form-based processes that have multi-step approval processes across campus.

Build boasts an extensive feature set accessible to be utilized by any staff or faculty member with no IT support required.

CONSIDER NINTEX WHEN...
Your institution is heavily reliant on Sharepoint or Office 365 and would like to create integrated processes with these offerings.

Nintex has a robust, powerful feature set yet can quickly add-up in cost due to their Cloud model based off limited packs of workflows.
